

Linux exercise 4 -Basic commands

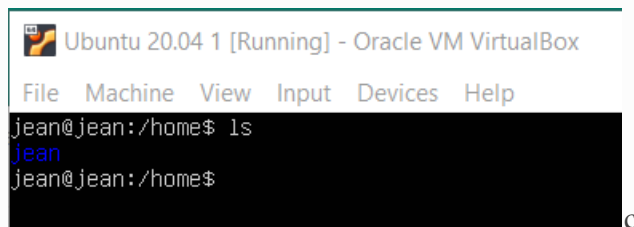

1. What is the path for your home directory? How do you change your current working directory to your home directory?

a. This is the home directory for user “jean”

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
jean@jean:/$ _
```

- b. This is the overall home directory where we find home directories for different users

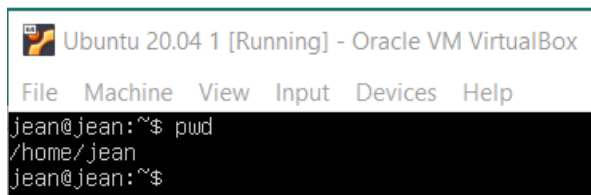

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
jean@jean:/home$ ls
jean
jean@jean:/home$
```

The commands `cd` and `cd ~` will switch from current directory to home directory.

2. How can you find out your current working directory?

With the command `pwd`

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
jean@jean:~$ pwd
/home/jean
jean@jean:~$
```

3. Explain briefly what option `-p` does when used with `mkdir` command. In addition, find out what version number of `mkdir` command you have.

mkdir -p command can be used to create nested directories, that is if there are no parent directory it can create them too.

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
jean@jean:~$ mkdir -p parent_dir/child_dir
jean@jean:~$ ls
parent_dir
jean@jean:~$ cd parent_dir/
jean@jean:~/parent_dir$ ls
child_dir
jean@jean:~/parent_dir$
```

You can find its version with **mkdir --version** command

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
jean@jean:~$ mkdir --version
mkdir (GNU coreutils) 8.30

Written by David MacKenzie.
jean@jean:~$
```

4. Create the following directory structure including the files to your home directory using your Linux shell. Files can be empty or containing text.

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
root@jean:/home/jean# mkdir -p h1/dir_{1..3}
root@jean:/home/jean# ls
h1
root@jean:/home/jean# cd h1/
root@jean:/home/jean/h1# ls
dir_1 dir_2 dir_3
root@jean:/home/jean/h1# cd dir_
dir_1/ dir_2/ dir_3/
root@jean:/home/jean/h1# cd dir_2
root@jean:/home/jean/h1/dir_2# touch File1.txt File2.txt File3.txt File4.txt
root@jean:/home/jean/h1/dir_2# ls
File1.txt File2.txt File3.txt File4.txt
root@jean:/home/jean/h1/dir_2#
```

5. **Copy all files with .txt extension from dir2 to dir1 using relative path for directories using only one command.**

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
root@jean:/home/jean/h1/dir_2# ls
File1.txt File2.txt File3.txt File4.txt
root@jean:/home/jean/h1/dir_2# cp *.txt /home/jean/h1/dir_1
root@jean:/home/jean/h1/dir_2# cd /home/jean/h1/dir_1
root@jean:/home/jean/h1/dir_1# ls
File1.txt File2.txt File3.txt File4.txt
root@jean:/home/jean/h1/dir_1#
```

6. **Move all files starting with string File1 from dir2 to dir3 using absolute path for directories using only one command.**

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
root@jean:/# mv /home/jean/h1/dir_2/File1* /home/jean/h1/dir_3
root@jean:/# /home/jean/h1/dir_3
bash: /home/jean/h1/dir_3: Is a directory
root@jean:/# cd /home/jean/h1/dir_3
root@jean:/home/jean/h1/dir_3# ls
File1.txt
root@jean:/home/jean/h1/dir_3#
```

7. **Create tmp directory inside your home directory. Copy directory structure created in fourth part starting from directory h1 into the tmp directory in one command.**
The final directory tree should then look like this: /home/your_user/tmp/h1...

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
root@jean:~# mkdir /home/jean/tmp
root@jean:~# cd /home/jean
root@jean:/home/jean# ls
h1 tmp
root@jean:/home/jean# cp -r h1 tmp
root@jean:/home/jean# cd tmp
root@jean:/home/jean/tmp# ls
h1
root@jean:/home/jean/tmp# cd h1
root@jean:/home/jean/tmp/h1# ls
dir_1 dir_2 dir_3
root@jean:/home/jean/tmp/h1# _
```

8. **Remove tmp/h1 directory structure from your home directory using only one command.**

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
root@jean:/home/jean# rm -r tmp
root@jean:/home/jean# ls
h1
root@jean:/home/jean#
```

9. **Rename File1.txt file under dir1 in a way it begins with string NewFileX1 (File1.txt → NewFileX1.txt)**

```
Ubuntu 20.04 1 [Running] - Oracle VM VirtualBox
File Machine View Input Devices Help
root@jean:~# mv /home/jean/h1/dir_1/File1.txt /home/jean/h1/dir_1/NewFileX1.txt
root@jean:~# cd /home/jean/h1/dir_1
root@jean:/home/jean/h1/dir_1# ls
File2.txt File3.txt File4.txt NewFileX1.txt
root@jean:/home/jean/h1/dir_1# _
```

10. Absolute path is a full path to a file(folder) from the root directory (/)

Ex: **/home/jean/h1/dir_1** is an absolute path to the directory **dir_1**

A relative path is a path that starts at the current directory and doesn't start with /

Ex: Suppose your **pwd** is **/home/jean/h1/** and you want to go to the directory **dir_1**. In this case you will just type **cd dir_1**. You will not need to type the whole absolute path.
